

ANANDHARAJ A

Full Stack Software Developer

PROFESSIONAL OBJECTIVE

Results-driven Full Stack Software Developer specializing in FastAPI, Node.js, microservices, scalable systems, real-time observability, and AI-integrated platforms. Focused on building scalable backend infrastructure, data-driven systems, and high-performance enterprise applications.

CONTACT INFORMATION

- **Phone:** +91 8925191383
- **Email:** aaraj232@gmail.com
- **Location:** Kovilpatti, Tamil Nadu, India
- **LinkedIn:** <https://www.linkedin.com/in/anandharaj-a-821029229/>
- **GitHub:** <https://github.com/Raj-232>
- **Portfolio:** <https://portfolio-2-0-0gr5.onrender.com/>

PROFESSIONAL SUMMARY

Highly skilled Full Stack Software Developer with experience building scalable, high-performance web, mobile, and data-intensive platforms. Expertise in FastAPI, Node.js, React/Next.js, Flutter, Kafka, Redis, WebSockets, microservices, and scalable systems. Strong background in observability, OpenTelemetry, AI/ML pipelines, RAG systems, and big-data technologies including Apache Iceberg, Spark, Trino, and Hive. Proven ability to optimize performance, design clean architectures, and deliver secure, production-ready enterprise solutions.

TECHNICAL SKILLS

- **Languages:** JavaScript, TypeScript, Python, Dart
- **Frontend:** React.js, Next.js, Redux, Zustand, Tailwind CSS, MUI, Google Maps, Ola Maps
- **Backend:** FastAPI, Node.js, NestJS, Express.js, REST APIs, Microservices, WebSocket
- **Databases:** PostgreSQL, MongoDB, Trino, Apache Iceberg
- **Big Data & Streaming:** Kafka, Spark, Hive, Iceberg, MinIO, Trino, Superset
- **DevOps & Cloud:** Docker, Kubernetes, OpenShift, Helm, ArgoCD, AWS, CI/CD, GitHub Actions, Linux
- **AI/ML & Observability:** TensorFlow, PyTorch, Isolation Forest, Milvus, LangChain, Open Telemetry, Prometheus, Grafana, Jaeger
- **Tools:** Redis, Data Mesh, RBAC, Real-time Systems

SOFT SKILLS

Problem Solving, System Design, Collaboration, Ownership, Mentoring, Agile Practices

WORK EXPERIENCE

Full Stack Software Developer / Zaga Open Source Pvt Ltd

Jun 2024 - Present / Kovilpatti, India

- Architected and executed Data Mesh Architecture using OTel, Kafka, Iceberg, Hive, MinIO, Trino, and Redis.
- Constructed a real-time observability platform integrating logs, traces, and metrics.
- Created scalable FastAPI microservices with CI/CD automation.
- Engineered React dashboards for infrastructure monitoring and analytics.
- Executed RBAC using Trino access controls for secure data governance.
- Led deployments using Kubernetes, Docker, Helm, AWS, and OpenShift.
- Streamlined MinIO storage for large-scale telemetry workloads.
- Engineered real-time analytics pipelines using Kafka + Trino.
- Created ML anomaly detection models using Isolation Forest.
- Engineered intelligent AI Agents using LangChain, RAG pipelines, and custom tools.

Software Development Engineer / Icanio Technologies

Sep 2023 - Feb 2024 / Tirunelveli, India

- Engineered responsive React.js UI components and integrated REST APIs.
- Created backend services using Node.js, SQL, and MongoDB.
- Executed authentication workflows and optimized DB operations.
- Collaborated with Agile teams, performed code reviews, and cross-team development.

PROJECTS

AI/ML Management Dashboard - Multi-Model Training & Orchestration

- Centralized MLOps platform enabling orchestration, monitoring & multi-model lifecycle automation.
- Unified FastAPI backend with structured training workflows, metadata logging & result pipelines.
- Incorporated version tracking, model execution history & real-time training dashboard.
- **Impact:** Reduced manual model deployment time by 65%, improved model observability.
- **Technologies:** FastAPI, Python, React/Next.js, Docker, PostgreSQL, AI/ML APIS

Data Lake Management & Data Product Platform

- Data product governance portal enabling Iceberg-based catalog & schema lifecycle automation.
- UI-driven query builder powered by Trino enabling no-SQL expertise required for analytics.
- Allowed teams to publish saved queries as production-grade REST APIs.
- **Impact:** Reduced analytics query execution time by 50% and eliminated manual SQL dependency.
- **Technologies:** FastAPI, Iceberg, MinIO, Trino, PostgreSQL, Docker

Observability & Monitoring Platform

- Real-time logging, metrics, traces & anomaly detection pipeline with LLM-based processing.
- Engineered cost & performance dashboards with automated anomaly alerts.
- **Impact:** Improved incident response & RCA time by 45%.
- **Technologies:** Spark, Iceberg, Kafka, OTel, Milvus, Trino, Docker, FastAPI, React

Online Meat Delivery App

- End-to-end ecommerce + delivery tracking system using real-time microservices.
- Incorporated payments, notifications & scalable caching.
- **Impact:** Reduced order processing latency by 35%.
- **Technologies:** FastAPI, Flutter, React.js, PostgreSQL, Redis, WebSocket, Razorpay, Docker

Perfido - SaaS Performance Testing Platform

- Engineered performance testing automation suite enabling real-time execution & reporting.
- Executed SSR/SSG optimizations and caching for high-speed analytics.
- **Impact:** Increased test execution throughput by 30%.
- **Technologies:** Next.js, Node.js, Express.js, PostgreSQL, Docker, AWS

ACHIEVEMENTS

- Improved microservices response performance by up to 45% through optimized scalable caching and storage.
- Delivered production-grade ML anomaly detection system increasing detection accuracy by 35%.
- Led Kubernetes deployment automation reducing release cycle by 50%.
- Designed scalable Data Mesh infrastructure powering real-time data access across scalable teams.

CERTIFICATIONS & TOOLS

- Kubernetes & Docker (Production Deployment Experience)
- AWS Deployment & CI/CD Pipelines
- OTel Observability & Distributed Tracing
- Performance Optimization and System Scalability
- Data Engineering Pipelines with Kafka, Spark, Iceberg, Trino

EDUCATION

Bachelor of Engineering (B.E) - Computer Science and Engineering

- Government College of Engineering, Tirunelveli | 2019-2023 | CGPA: 70%
